

Proposed workflow with explanation

This Includes and applies the principles of management to solve the problem

- First, in order to improvise the time taken to recieve the issues, this part can be automated. Automation of repetitive tasks can be done easily
- Then, to increase efficiency and decrease the time taken to find, fixes and test the bug we need to install upgraded version of debugger or an AI that does this work.
- Skill-gap training can be done for employers to help them learn these upgraded version of these softwares and AI that helps even them to increases their efficiency.
- Specialisations or placing the tight person for the right job should also be doen by recognising their talent that thus improves productivity.
